

## Slide 1 and 2

- ▶ Force is a push or pull that makes objects interact with each other.
- ▶ This interaction results in a change in the motion or shape of the objects involved.
- ▶ A force can cause an object with mass to change its velocity, which includes to begin moving from a state of rest.

# Slide 3

## Types of Forces

**Contact forces:** interactions between objects that touch

applied force

spring force

drag force

frictional force

normal force

**Non-contact forces:** attract or repel, even from a distance

magnetic force

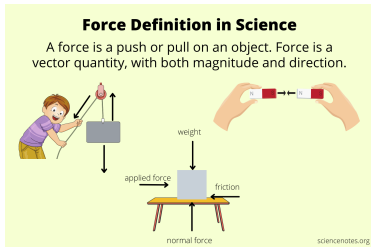

electric force

gravitational force
